PREVENTABLE Trial: Testing the Benefits of Statins in Older Adults

What people are saying about the PREVENTABLE Trial:

"As our population ages, maintaining good cognitive and cardiovascular function will be key in reducing health care costs. PREVENTABLE is answering an important question in an important patient population."

"Proven recommendations for reducing a person's risk of dementia at any stage are very limited. My patients repeatedly tell me that the goal of this program, finding ways to prevent dementia, is one of their most important priorities for health care."

"It is important to fully understand the benefits and risks of treating elderly patients without documented coronary disease with a statin."
